

Paso 2

Necesitamos obtener nuestro project key de sonar para comprobar si se ha conectado correctamente con Git.

Para ello entramos en sonar → entramos en nuestro proyecto.

En el menú lateral seleccionamos administration→ update key

The screenshot shows the SonarQube interface for the 'demo-prueba' project. The top navigation bar includes 'My Projects' (highlighted with a red box), 'My Issues', and 'Explore'. Below the navigation is a breadcrumb trail: 'davidtome97 > demo-prueba > Overview'. The main content area displays the project name 'D demo-prueba' and its status as 'Main'. On the left, a sidebar menu is open under 'Administration' (highlighted with a red box). The menu items listed are: General Settings, Analysis Method, Quality Profiles, Quality Gate, New Code, Links, Permissions, Background Tasks, Update Key (highlighted with a red box and labeled '4'), Webhooks, Upgrade, and Deletion. The 'Update Key' button is located at the bottom of the sidebar.

Ahí vemos y copiamos nuestro Project key y lo metemos en el paso 2 del asistente.

The screenshot shows the 'Update Key' dialog box. The title is 'Update Key' and the sub-instruction is 'Edit the key of a project.' A note states: 'Key changes must be made here BEFORE analyzing the project with the new keys, otherwise the analysis will simply create a new key, rather than updating the existing project.' An arrow points from the note to the 'Project Key' input field, which contains the value 'davidtome97_demo-prueba2'. Below the input field is a note: 'Up to 400 characters. All letters, digits, dash, underscore, period or colon.' At the bottom are 'Update' and 'Reset' buttons.
